

A repository of learning objects to support academic librarians in their instructional role.

“Burning Needs”: Learning Objects by Request ALPS LINK Fall 2010 Contest

This year’s contest is a little different. A number of librarians have told us they are looking for instructional materials that fit specific needs. Here are some of the requests we’ve heard so far:

- “I’d like to see lesson plans which make use of clicker polling technology.”
- “Has anyone created guides for the Ovid interfaces that came out over the summer?”
- “I’m looking for ideas on in-class activities to teach web evaluation.”

Have you created learning objects which fit these needs? Or do you wish you had examples of colleagues’ learning objects which met your own burning needs?

Either way, contact us and let us know! We’ll help you upload your learning objects, or add your requests to the “burning needs list” and share this with your colleagues across BC.

And as always, we’re looking for librarians to upload learning objects they’ve created, or nominate the great work of by colleagues. *Laud a Librarian!* Again there will be prizes for the best objects added to the LINK repository. Don’t hesitate; the deadline is Friday, Nov. 19.
